Figure 1 is a technical diagram illustrating the proposed method for determining the position of the center of gravity (CG) of a ship. The diagram shows a cross-section of a ship's hull and superstructure. A coordinate system (x, y) is established at the top right. A dashed line represents the CG of the hull. A red line represents the CG of the hull without the superstructure. A blue line represents the CG of the superstructure. A green line represents the CG of the hull with the superstructure. A yellow line represents the CG of the hull with the superstructure and the CG of the superstructure. A legend at the bottom left explains the symbols: 'x' for the center of gravity of the hull, 'y' for the center of gravity of the superstructure, 'z' for the center of gravity of the hull with the superstructure, and 'w' for the center of gravity of the hull with the superstructure and the center of gravity of the superstructure. A scale bar at the bottom right indicates 100m.
